The Myth: For information on what you can do go to www.reta.ca

The Facts: Without 100% proof that electromagnetic fields (EMFs) cause leukemia, other cancers, Alzheimer’s disease, depression, suicide, and many other health problems, there is no need to warn or protect the public.

International Commission for Electromagnetic Safety

In 2008, the ICEMS passed a resolution in Venice which included the following statements: “As an outcome, we are compelled to confirm the existence of non-thermal effects of electromagnetic fields on living matter, which seem to occur at every level of investigation from molecular to epidemiological. The... protection standards recommended by international standards organizations, and supported by the World Health Organization, are inadequate.”

It is difficult, if not impossible, to discount statements of caution and recommendations made by the many medical doctors, scientists and engineers who are members of the ICEMS and who are experts on EMFs and their effects on human and animal health.

Evidence is mounting... exposures to EMF cannot be ignored.
